SRINIVAS

Azure Data Engineer | ADF · Databricks · PySpark · Power BI

Mobile: +91-9618801484 | **Email: srinivas05tech@gmail.com**

PROFESSIONAL SUMMARY

Azure Data Engineer with 4.5+ years of IT experience, including 6 months as a Power BI Developer and 4 years delivering enterprise data engineering solutions on Microsoft Azure. Hands-on expertise in Azure Data Factory, Azure Databricks, and PySpark for building scalable ETL/ELT pipelines, along with strong grounding in Power BI reporting and data visualization. Proven ability to design metadata-driven ingestion frameworks, implement Medallion (Bronze/Silver/Gold) architectures, and deliver analytics-ready data for business stakeholders. Recently applied Generative AI (Azure OpenAI, LangChain, RAG) to automate data documentation and enable natural-language access to curated datasets.

TECHNICAL SKILLS

Cloud & Data Platforms	Azure Data Factory (ADF v2), Azure Databricks, ADLS Gen2, Azure Blob Storage, Azure SQL DB, Azure Synapse DWH, Delta Lake, Key Vault, Logic Apps
Programming & Querying	PySpark, SQL (T-SQL), DAX, Power Query (M)
BI & Visualization	Power BI (Reports, Dashboards, Data Modeling, DAX, Power Query)
Data Engineering	ETL/ELT, Medallion Architecture (Bronze/Silver/Gold), Metadata-Driven Frameworks, Incremental Load, Data Ingestion
Generative AI	Azure OpenAI Service (GPT models), LangChain, Retrieval-Augmented Generation (RAG), Vector Search / Embeddings, Prompt Engineering
DevOps & Tooling	Azure DevOps, Git, CI/CD Pipelines, JIRA

EMPLOYMENT HISTORY

Organization	Role	Duration
Tata Consultancy Services (TCS)	Azure Data Engineer	Aug 2022 -- Present
Capgemini Technology Services India Ltd	Consultant	Feb 2022 -- Aug 2022

PROFESSIONAL EXPERIENCE

Azure Data Engineer | TCS — Enterprise Data Platform Modernization **Oct 2024 -- Present**

Environment: Azure Data Factory (ADF), Azure Databricks, PySpark, ADLS Gen2, Delta Lake, Azure SQL DB, Azure OpenAI Service, LangChain, Vector Search, Azure DevOps, Git

- Built PySpark notebooks in Azure Databricks for large-scale data transformation, cleansing, and loading into Delta tables across Bronze, Silver, and Gold layers.
- Designed and implemented metadata-driven ADF pipelines to automate ingestion from multiple on-premises and cloud sources into ADLS Gen2, reducing manual pipeline configuration effort.
- Implemented Medallion (Bronze/Silver/Gold) architecture, applying incremental load logic, data type standardization, and data quality checks in the Silver layer.
- Developed Gold layer datasets by applying business transformation logic in Databricks, delivering analytics-ready data for downstream reporting teams.
- Created and scheduled Databricks jobs and ADF triggers for automated pipeline execution, and monitored production runs to ensure SLA compliance.

- Built a Gen AI-powered data documentation assistant using Azure OpenAI (GPT models) and LangChain to auto-generate metadata descriptions, column-level data dictionaries, and pipeline documentation from Delta table schemas, cutting manual documentation effort significantly.
- Designed a Retrieval-Augmented Generation (RAG) pipeline using Azure OpenAI embeddings and a vector index over Gold layer datasets, enabling business users to query curated data and pipeline logic through natural language.
- Collaborated with business stakeholders and the reporting team to translate data requirements into reliable, reusable pipeline components.
- Managed source control and CI/CD deployments using Azure DevOps and Git across DEV, QA, and PROD environments.
-

Data Engineer (ADF) | TCS — Enterprise Data Ingestion **Sep 2022 -- Aug 2024**
Environment: Azure Data Factory (ADF v2), Azure Blob Storage, ADLS Gen2, Azure SQL DW, Azure Synapse, Key Vault, Azure DevOps

- Designed and developed end-to-end ADF pipelines to ingest data from on-premises SQL Server, Oracle, and Teradata sources into ADLS Gen2 across multiple layers.
- Worked extensively on ADF core components including Linked Services, Datasets, Data Flows, Pipelines, Activities, and Triggers, using both Azure and Self-Hosted Integration Runtimes.
- Built dynamic, parameterized pipelines using Copy Data, Get Metadata, Lookup, Stored Procedure, For Each, If, and Execute Pipeline activities to extract multiple files into multiple targets through a single reusable pipeline.
- Implemented Mapping Data Flow transformations such as Derived Column, Select, Aggregate, Union All, Join, Alter Row, and Conditional Split to cleanse and reshape data.
- Ingested daily incremental/delta files into ADLS and loaded curated data into Azure Synapse DWH for reporting consumption.
- Set up CI/CD pipelines to migrate ADF pipeline templates from lower to higher environments, supporting deployments across DEV, QA, and PROD.
- Participated in production support, monitored pipeline runs, and performed data recovery activities for failed loads.

Power BI Developer | Capgemini Technology Services India Ltd — Business Reporting & Analytics **Feb 2022 -- Aug 2022**
Environment: Power BI Desktop & Service, DAX, Power Query (M), Azure SQL DB, Excel

- Developed interactive Power BI dashboards and reports to support business decision-making across multiple functional teams.
- Built data models and calculated measures using DAX, and performed data transformation and cleansing using Power Query.
- Connected Power BI to Azure SQL DB and other data sources, and configured scheduled refreshes to keep reports up to date.
- Worked with business stakeholders to gather reporting requirements and translate them into clear, actionable visualizations.
- Published and managed reports and dashboards on the Power BI Service, including workspace and access management.

EDUCATION

Bachelor of Technology (B. Tech) — Nalla Malla Reddy Engineering College, 2015
